

## SIMPLETUNE

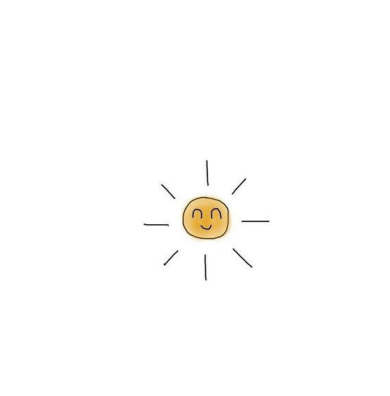

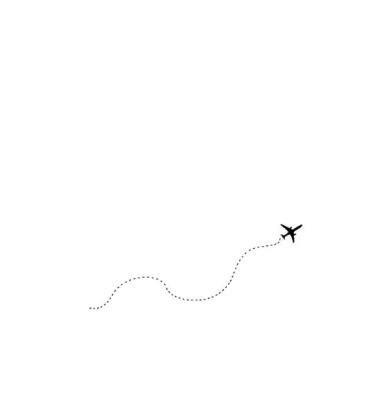

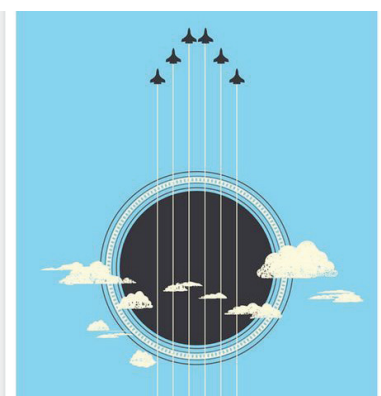

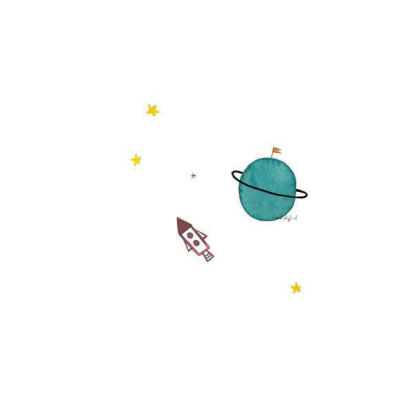

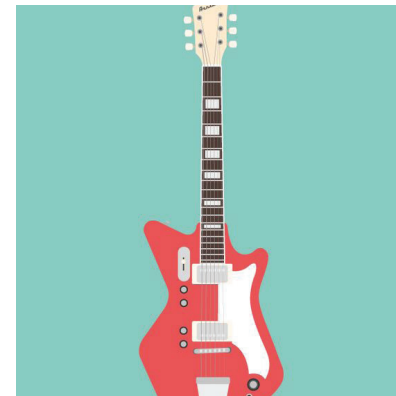

My idea is a clean and easy to read simple guitar tuner app for new and experienced guitar and bass players. It will be minimal in design, easy to read and understand, and to discover new tunings, making it fun and inviting to new guitar and bass players.

***The easiest way to stay in tune.***

The app will be for guitar and bass players who need to keep their instruments in tune (everyone). It will make use of the phones internal microphone and listen to the audio to determine the current guitar pitch. From the home screen, the user will be able to select the instrument type, some of the common tunings, and be able to see the current pitch.
